

PVC Strip Curtains

PVC strip curtains are an energy efficient product used world-wide, with proven significant savings. When fitted on exposed building entrances heat loss reduction is guaranteed.

As well as temperature control, strip curtains have many other uses including dust control, fume control, noise reduction and the spread of airborne pollutants. Specially coloured PVC strips can also provide protection from welding flash by removing dangerous UV rays.

Whatever your application, PVC strip curtains can be part of your Energy Efficiency or Workplace Health & Safety Plans.

Protect your workforce and your bank balance

Rising energy costs and Health & Safety requirements are continually forcing businesses to think about cost reduction and protecting their workforce. Texam PVC strip curtains offer a cost conscious method of reducing common workplace problems such as draughts, noise, dust, and welding flash etc while at the same time providing unhindered access and maximum visibility.

Temperature Control

Texam PVC Strip Curtains fitted on external doors help retain essential working temperatures and reduce heating and air conditioning costs. Perfect two way vision makes our product safe for pedestrian and fork lift truck access.

Food Storage

Texam Polar Grade PVC Strip Curtains are designed to help maintain safe food storage conditions. These curtains are particularly suitable for use on chiller cabinets where temperature and humidity are important and on freezers where it is important to maintain sub zero temperatures and at the same time provide access.

Dust, Spray & Fume Control

Health & Safety requires the containment and removal of air borne materials that can be harmful to health. Air borne materials may even damage heating, cooling or air conditioning units necessitating expensive repair bills. Texam PVC Strip Curtains help retain air borne materials and facilitate proper air filtration systems in areas where they are needed.

Welding Booths

Welding flash causes considerable problems to those not wearing eye protection. A welding booth fitted with Texam PVC Weld Screen Curtains will protect persons working outside the welding area and also retain welding fumes in a dedicated area allowing fume extraction systems to work better and more efficiently. Typically welding screens will eliminate 99% of dangerous UV rays and at the same time let through most of the remaining light spectrum for near perfect two way vision.

We provide unique solutions to production line processes that save time and money.
